

Product Line

Fire Classifications	
As per EN	As per NFPA
A Solid Combustible Materials	A Ordinary Combustibles
B Flammable Liquids	B Flammable Liquids and Gases
C Flammable Gases	C Electrical Equipment
F Cooking oils and fats	

Our product range includes generators of various sizes that can be used singularly or in combination to protect small or large volumetric enclosures. They are constantly supported with up to date information on fire engineering standards and marine industry requirements.

FIREBAN

MARINE Fire Protection Systems

FireBan Advantages

- Tremendous space & weight saving
- Minimal maintenance costs
- 15 years product life cycle
- Easy installation in new or retrofit projects
- Total flooding action to extinguish fire at source
- Easy to transport
- No piping or nozzles required
- No overpressure limitations
- Operating temperatures: -50°C to +100°C

LIMITATION OF LIABILITY

In no event, regardless of cause, FirePro Systems Ltd shall be liable for any indirect, special, incidental, punitive or consequential damages of any kind, whether arising under breach of contract, tort (including negligence), strict liability or otherwise, even if advised of the possibility of such damages.

Reinventing
Fire Suppression

Protecting Marine Assets

We design and manufacture efficient and effective fire suppression systems with a cutting-edge environment friendly fire suppression technology. The modular, pre-engineered FireBan generators protect marine engine rooms and other spaces with minimal footprint. This is why leading naval Engineers and shipyards choose FireBan Marine systems to protect thousands of vessels worldwide.

Applications

Engine Rooms | Battery Rooms | Electrical Panels | Cargo Areas | Marine Gensets

Compliance

Our commitment to maintain the highest manufacturing and marine engineering standards is attested by the number of international Certificates, Listings and Approvals attained from the most respected industry organisations worldwide.

The Technology

Fireban systems use the latest generation of our patented FPC solid compound. When activated the FPC undergoes a transformation into a rapidly expanding extremely effective and efficient fire extinguishing condensed aerosol. The generated aerosol is propagated and evenly distributed in the enclosure under protection using its own momentum. Fire extinguishing is accomplished by the interruption of the chemical chain reactions occurring in the flame, without oxygen depletion.

FireBan technology was developed after many years of research & development, using environmentally friendly Potassium salts with no pyrotechnic materials involved. FirePro fire suppression systems are EPA SNAP listed for Normally Occupied spaces, as well as certified by numerous organizations for their environmental and eco-friendly nature. FireBan protects without harming the sea or water ecosystems.

*Indicative System Design

Total Flooding System Design

FireBan systems are designed in strict compliance with all relevant international standards: ISO 15779, NFPA 2010, IMO/MSC 1270, UL 2775, EN 15276, AS 4487.

FireBan engineered electrical parts, electronic control units and accessories, are fully certified for their compatibility. FireBan generators, monitoring panels and other marine components are listed separately and independently. Moreover, they are certified as an integrated system.

Our systems are trusted by industry leaders around the world
